

# RC TRASH CAN

By Dylan rogers and Phillip Houston

# RC TRASH CAN

- The rc trash can is a moving trash can that solves the problem of when you don't feel like getting up and you have to throw away some trash, if you have the rc trash can you wouldn't have to worry about this problem, you can just drive the trash can to you so you don't have to get up at all.

# WHAT WE WOULD HAVE CHANGED

- We would have changed the fact that the rc car could not turn and that we would have made the basketball hoop bigger and made the trash can sturdier and lighter.

# THINGS WE THINK WE DID WELL

- The thing we did well was mountings the trash can on the car with a few pieces of cardboard, and making the basket ball hoop really sturdy and light and easy and fun to use.

# CHALLENGES WE FACED

- One of the challenges we faced and overcame was finding a way to attach the trash can to the rc car and making it stay on there and making it stay straight up and not falling when we drove the car.
- Another challenge we faced was making the basketball goal that we put on the back of the trash can.
